

Investing in promising small and medium sized unlisted European companies

_

Supporting local talents with global potential

2022

Invest purposefully in talent and fast-growing local markets.

The Andersson Family Foundation is launching a "Vision 2050" fund that will invest in local small and medium-sized enterprises in Europe. The first countries to participate in the program are Poland, the Czech Republic, the Slovak Republic, Hungary, Lithuania, Estonia and Ukraine.

Our goal is to bring fast-growing companies to a global stage. We consider certain industries to be particularly promising in terms of growth in 10 to 30 years. These industries are:

IT - software development for financial services

Healthcare - innovative insurance and financial products

Manufacturing - apparel and accessories

Biotechnology - research and development of innovative technologies

Our vision is to build European bridges to international partner companies by entering these industries and create a global synergy between talent and global capital markets.

We believe in slow, steady and stable investment growth. Our ideal investment targets have a solid team, a proven track record and the potential to grow into global markets. All companies are private, unlisted companies that will go public within the next ten years.

The Andersson Family Foundation welcomes any potential company (with annual sales of at least CHF 1 million) that has established itself in a local market to apply for a possible funding round.
